

## MPLADS-SATARK SATARK - Simple Feature Guide

Problem Statement 26102 MoSPI / DIID 176,925 Real Government Works

Sentinel 1 VIDHI-KAVACH - - The Legal Shield Rules Referee

WHAT IT DOES: Checks if government laws, SC/ST mandatory quotas, and MPLADS guidelines are strictly followed before money is disbursed.

HOW TO EXPLAIN: Think of this like a referee in a football match. Government money has

as strict rules for example, you cannot use public funds to build private clubhouses, luxury guest houses, or buy private cars.

EXAMPLE: If someone tries to pass a bill for an unapproved private building in mid-March, VIDHI-KAVACH immediately blows the whistle and blocks it

---

Sentinel 2 PUNAR-DRISHTI - The Double-Dipping Clone Sentry

WHAT IT DOES: Catches duplicate or copy-pasted projects using smart text-matching TF-IDF Cosine Similarity.

HOW TO EXPLAIN: Imagine a dishonest contractor builds one concrete road in a village

using rural scheme money like MGNREGA. Then, he submits the exact same road under MPLADS scheme funds to get paid again.

EXAMPLE: It compares PCC Road near GP Office in both databases and catches double-billing instantly

---

Sentinel 3 ARTHA-DARPAN - - The Price Inflation Rate Book Checker

WHAT IT DOES: Compares claimed project costs against standard government benchmarks CPWD Delhi Schedule of Rates.

HOW TO EXPLAIN: Imagine going to buy a phone that costs 80,000, but the shopkeeper charges you 3,00,000. ARTHA-DARPAN keeps a standard price book for every state in India. If a standard 500-meter road

costs 13 Lakhs, but the contractor claims 26 Lakhs, ARTHA-DARPAN flags the excess risk.

EXAMPLE: It flags excess expenditure and calculates exact overpricing e.g., 13 Lakhs excess risk flagged.

---

Sentinel 4 CHAKRA-VYUH - The Contractor Syndicate Cartel Hunter

WHAT IT DOES: Exposes hidden networks and cartels between contractors, agencies, and officers using network graph theory.

HOW TO EXPLAIN: Sometimes, 3 or 4 contractor companies pretend to compete against each other in open tenders, but behind closed doors, they are all owned by the same family or group. CHAKRA-VYUH builds a network graph to expose these cartels.

EXAMPLE: If one single contractor secretly captures 85% of all project contracts in a district, CHAKRA-VYUH flags a Monopoly/Cartel Risk.

---

Sentinel 5 VIBHED-NETRA - - The 12D AI Anomaly Spotter

WHAT IT DOES: Finds suspicious projects by evaluating 12 different clues simultaneously using Machine Learning Isolation Forest.

HOW TO EXPLAIN: A human auditor can only look at 1 or 2 details at a time like cost or date. But this AI looks at 12 details simultaneously cost, duration, completion rate, location, payment pattern, etc. to spot anomalies.

EXAMPLE: A project that was approved in 1 day, spent 100% of its budget on day 2, but has zero physical progress stands out like a sore thumb to the AI.

---

Sentinel 6 SANKHYA-SATYA - - The Fake Bill Tender-Split Finder

WHAT IT DOES: Uses financial math Benford's Law and pattern recognition to catch fabricated numbers and tender splitting.

HOW TO EXPLAIN: 1 Tender-Splitting: Rules say any project above 5 Lakhs MUST go through an open public tender. Dishonest people split a 14 Lakh project into three fake bills of 4.95 Lakhs each to bypass tender rules.

EXAMPLE: Flags artificial bill splitting smurfing and round-number human-fabricated estimates.

---

Sentinel 7 BHU-DRISHTI - - The Satellite Ghost Asset Radar

WHAT IT DOES: Uses GPS coordinates and ISRO satellite maps to check if the project actually exists on the ground.

HOW TO EXPLAIN: What if someone claims 15 Lakhs for a Community Center, but it was never built BHU-DRISHTI checks the exact GPS latitude and longitude on satellite maps.

EXAMPLE: If the GPS location shows empty barren land, a lake, or a forest where a building was claimed to be constructed, BHU-DRISHTI flags it as a Ghost Asset

-----

MASTER SYSTEM   Unified Priority Score   Official Vigilance Memo

COMPOSITE SCORE: Combines all 7 sentinels into one clear score from 0 to 100. 0-30 is Green Clean, 30-70 is Yellow Medium Risk, and 70-100 is Red Critical Fraud Risk.

LEGAL MEMO: With one click, auditors can generate and print an official legal vigilance memorandum Form GFR-19A with Government letterhead, rule citations, and a field verification checklist

30-SECOND QUICK ELEVATOR PITCH:

SATARK is an all-in-one AI vigilance system for government projects. It uses 7 specialized AI sentinels to check rules, stop duplicate billing, check fair pricing, break up contractor syndicates, run financial math and
